XV COMMENTS:

Tank has been in place since 1947. Severe pitting + corrosion.
Clarence Hunter on site for G&O fire.
They hit a shale looking rock about 1' below the tank. The sandrock backfill on the street end had a slight odor of gas. They were able to dig down further on the building end. That sample is pretty hot, it is even stained green.

DIAGRAM OF SITE INVESTIGATION AT UST CLOSURE

Diagram should include physical structures such as roads, buildings, etc.; former location of USTs, pumps, product lines; soil sampling locations; and location of excavated soil.

Because of the location of the tank (in the middle of the parking lot) they decided to backfill until the test results came back.
